Crop Reporting Board

### FOREWORD

Texas Livestock Statistics updates the May 1970 bulletin and presents the county estimates for cattle, hogs, sheep, and goats. Improvements in sampling and new cattle classifications have necessitated revisions of some of last year's estimates; so both this year and last year are presented in this bulletin.

These county statistics have been made possible by the Texas Legislature which provided the Texas Department of Agriculture with funds for the operation of an annual county statistical program. The project is in cooperation with the Statistical Reporting Service of the U.S. Department of Agriculture.

Estimates of stocker cattle on farms and ranches January 1, 1971, as requested by the livestock industry are shown for Texas by Crop Reporting Districts for the first time in this publication. Estimates of total stocker cattle are also shown for States which normally ship cattle into Texas.

There are ten publications—Vegetables, Small Grains, Field Crops, Cotton, Fruit and Pecans, Dairy, Poultry, Livestock, Cash Receipts, and Prices—either published or in the process of preparation and publication.

In addition, one page summaries for all items, by counties, will be combined into one bulletin, Texas County Statistics. Single sheets for individual counties will also be available upon request.

These county livestock statistics do much to present the current livestock picture throughout the State of Texas. Texas producers and agri-business, thus, have updated information for planning their production and marketing programs.

Sincerely,

John C. White  
Commissioner of Agriculture

## CROP REPORTING DISTRICTS

## A WORD OF EXPLANATION

The survey methods are explained in detail at the back of the bulletin as has been the case for the other commodity county bulletins. However, a word of explanation may be helpful.

The county data program is based on probability multiple frame sampling. A complete census would cost ten times as much. A sample survey to produce county estimates for 60 items for 254 counties is a big project. Procedures have to be devised and revised. Improvements in coverage and accuracy have occurred again this year in comparison with the previous years. The December 1970 Livestock Survey included some 26,000 individual farm reports compared with 17,000 two years earlier.

The January 1 Sheep and Goat Survey included some 5,300 reports, an increase of 2,400 over the January 1, 1969, survey. Still, coverage is not as adequate as needed. This is especially true for the universe list of names as constant updating is necessary.

Lists of large livestock operators are being updated again in the summer of 1971.

For certain items (including broilers, turkeys, wool, mohair, milk), much aid from industry and Government was a substantial help in establishing the estimates.

Definitions are not entirely comparable with the 5-year Federal Census. The Government programs have generally placed acreage for a crop in the county where the land was located--and this is also true of the Texas Crop and Livestock Reporting Service estimates. The Federal Census has tended to credit land and commodities produced to the county in which the farm or ranch headquarters is located. On livestock items, particularly cattle, some significant differences occur due to this definition. Therefore, the county estimates prepared for January 1, 1970, and 1971 are not comparable with the numbers from the 1964 Census.

New cattle classifications were also developed and 1970 estimates of beef cows and milk cows are shown by both methods for comparability.

Revisions for some counties for January 1, 1970, for beef cows, milk cows, all cattle, all sheep, ewes 1+, and goats have been made. Revisions have not been made for January 1, 1969, so there is some lack of comparability with 1970 and 1971. Some rather large year-to-year differences for individual counties occur due to changes in number of cattle on feed for market, the occurrence of more or less grazing, especially on small grain pastures at the time of the survey, and the shifts of cattle by operators of large holdings from county to county in different years.

**CATTLE AND CALVES: Number on farms, Texas, January 1, 1970-1971**

| Year | Cows and heifers that have calved |           | Heifers 500 pounds or over |                       |       | Steers, bulls, and heifers |                         |                                        | Total  | Value            |                      |
|------|-----------------------------------|-----------|----------------------------|-----------------------|-------|----------------------------|-------------------------|----------------------------------------|--------|------------------|----------------------|
|      | Beef cows                         | Milk cows | Beef cow replacements      | Milk cow replacements | Other | Steers 500 lbs. and over   | Bulls 500 lbs. and over | Steers, heifers & bulls under 500 lbs. |        | Average per head | Total                |
|      |                                   |           |                            |                       |       |                            |                         |                                        |        | <u>Dollars</u>   | <u>1,000 dollars</u> |
| 1970 | 5,556                             | 354       | 733                        | 98                    | 623   | 1,343                      | 318                     | 3,187                                  | 12,212 | 155.00           | 1,892,860            |
| 1971 | 5,791                             | 355       | 754                        | 101                   | 634   | 1,365                      | 328                     | 3,250                                  | 12,578 | 160.00           | 2,012,480            |

# CATTLE AND CALVES MOVEMENT OUT AND INTO TEXAS ON HEALTH CERTIFICATES, 1970

The Texas Animal Health Commission tabulates the health certificates filed monthly with their office. These tabulations include truck and rail movements out of Texas and into Texas. Under Texas law, all livestock must have a health certificate unless consigned to a federally inspected slaughtering establishment, federally inspected public stockyard, or specifically approved auction market. The United States maps below show the states sending and receiving cattle and calves.

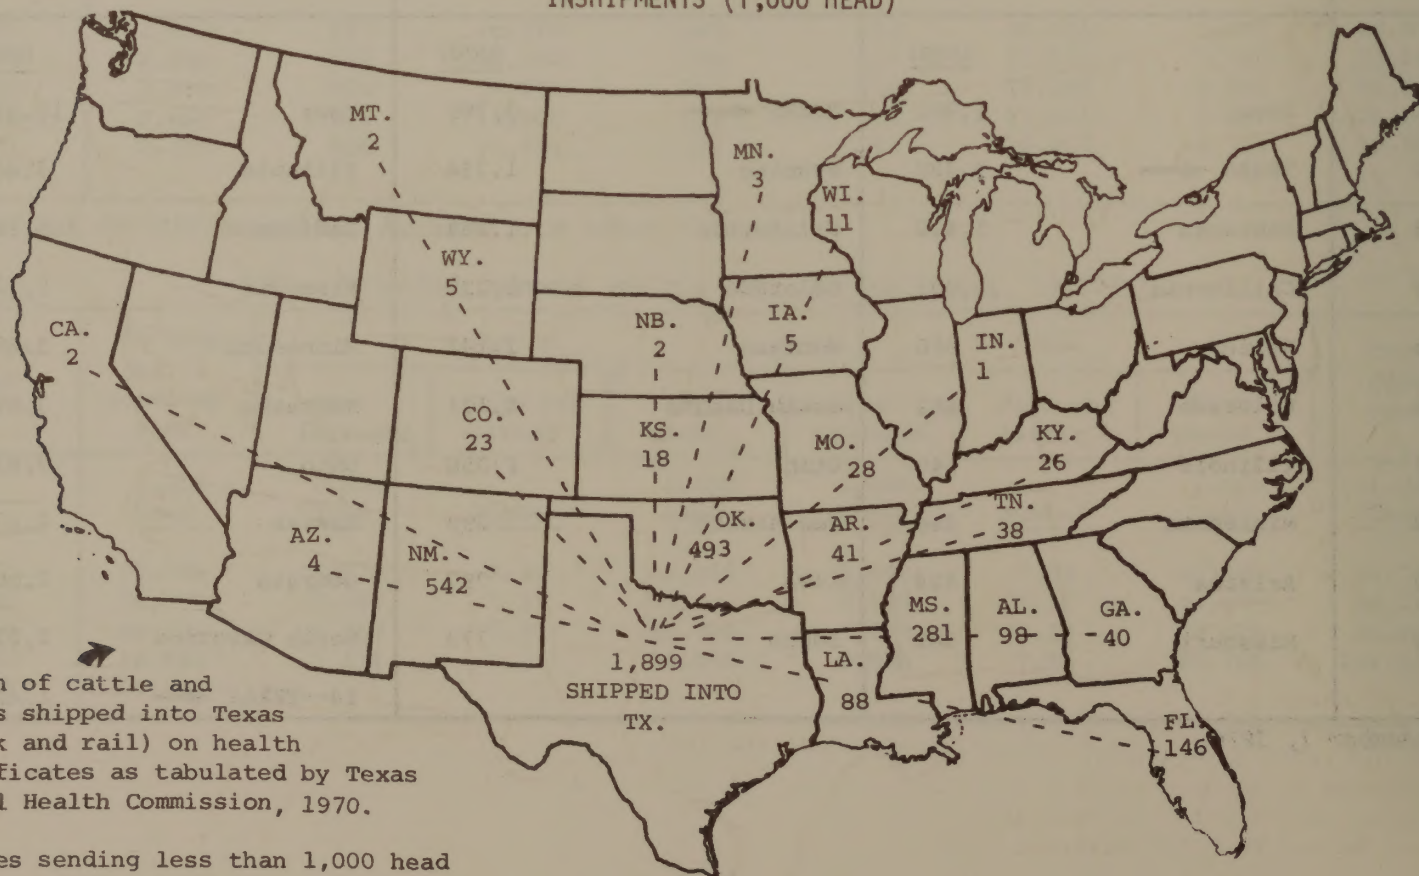

OUTSHIPMENTS (1,000 HEAD)

Destination of cattle and calves shipped from Texas (truck and rail) on health certificates as tabulated by Texas Animal Health Commission, 1970.

(States receiving less than 1,000 head not shown.)

INSHIPMENTS (1,000 HEAD)

Origin of cattle and calves shipped into Texas (truck and rail) on health certificates as tabulated by Texas Animal Health Commission, 1970.

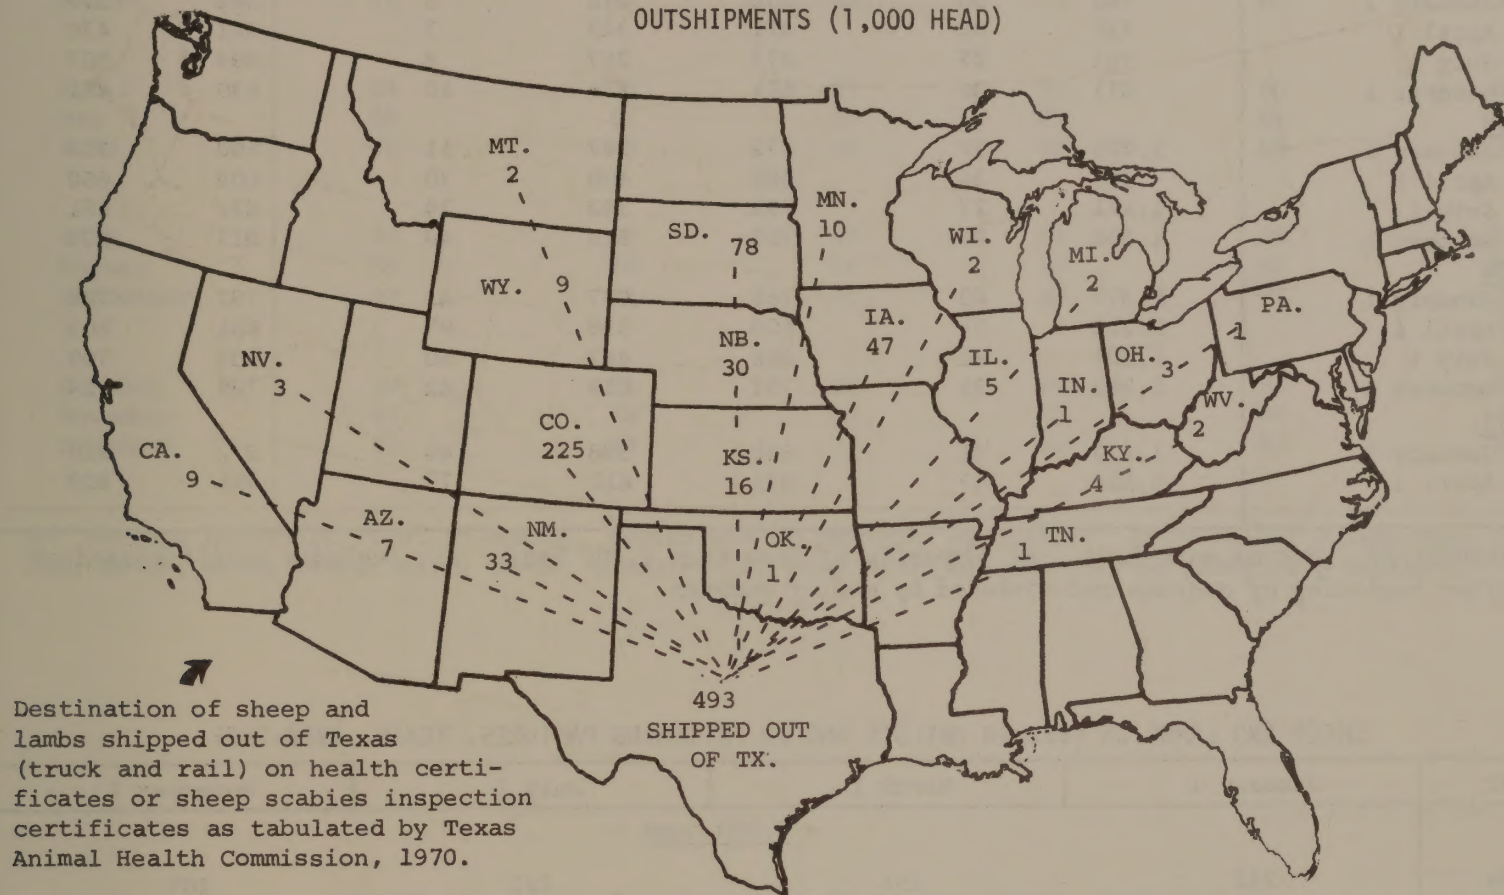

(States sending less than 1,000 head not shown.)

**SHEEP AND LAMBS MOVEMENT OUT AND INTO TEXAS ON HEALTH CERTIFICATES  
AND SHEEP SCABIES INSPECTION CERTIFICATES, 1970**

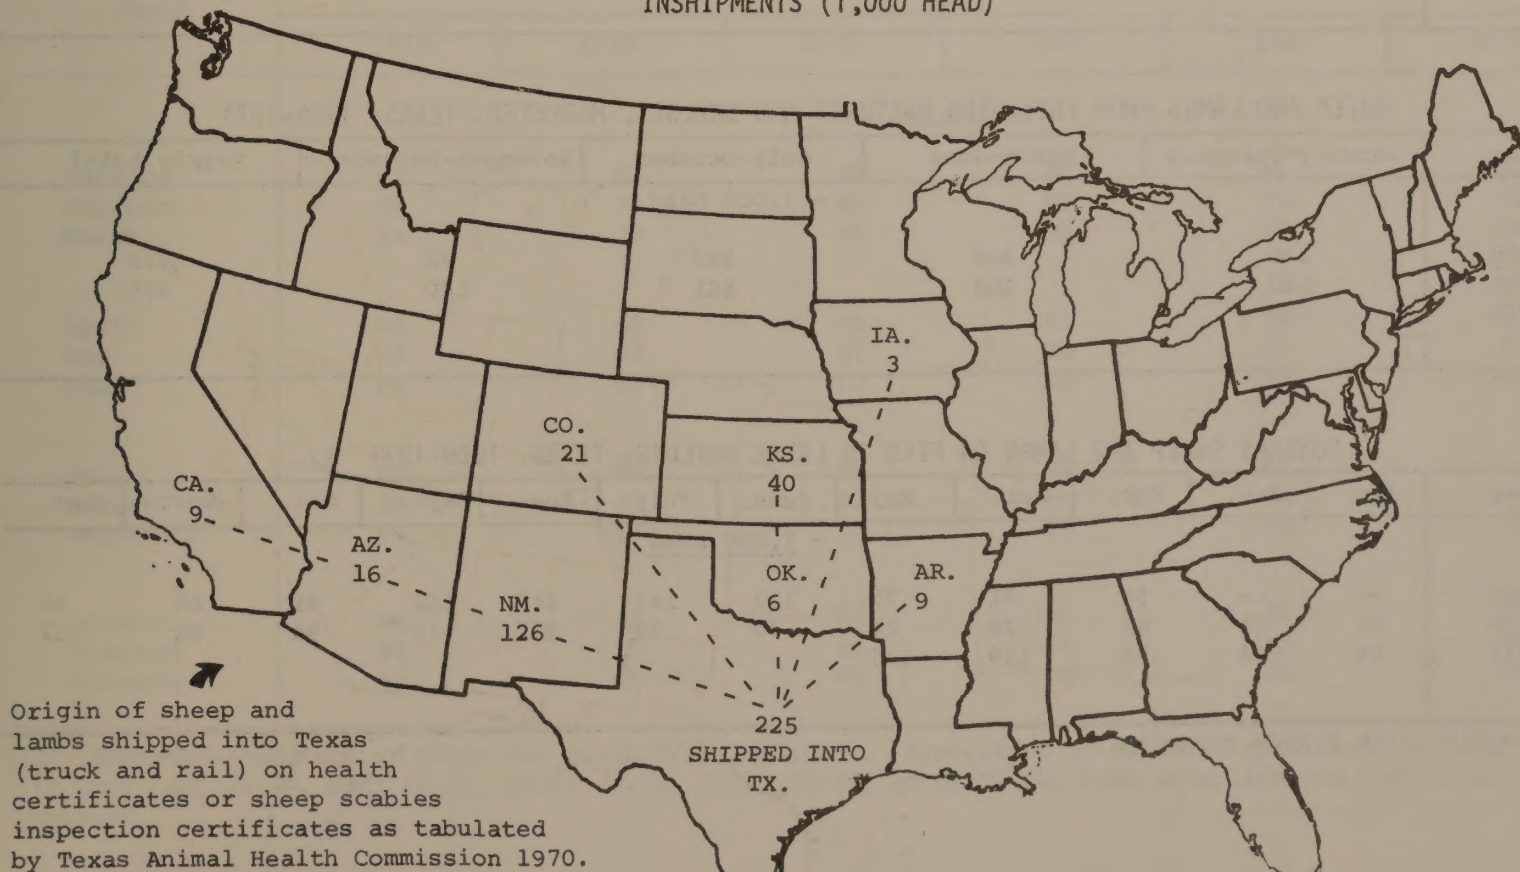

The Texas Animal Health Commission tabulates the health certificates and sheep scabies inspection certificates filed monthly with their office. The tabulations include truck and rail movements out of and into Texas. Under Texas law, all livestock must have a health certificate unless consigned to a federally inspected slaughtering establishment, federally inspected public stockyard or specifically approved auction market. The United States maps below show the states sending and receiving sheep and lambs.

**OUTSHIPMENTS (1,000 HEAD)**

(States receiving less than 1,000 head not shown.)

**INSHIPMENTS (1,000 HEAD)**

(States sending less than 1,000 head not shown.)

**CATTLE AND CALVES: Number fed in large and small feedlots, time on feed, placements and marketings quarterly, Texas, 1968-1971**

| Year and quarter      | Cattle and calves fed in |                      | Length of time on feed beginning each quarter |               |                    | Number placed on feed preceding quarter <u>3/</u> | Marketings preceding quarter <u>3/</u> |

1/ Revised. 2/ Cow classification for January 1, 1970 and prior years is based on age. Also beginning with 1970 the classification is based on cows that have calved, regardless of age and that is the series to be continued. \* Item reported but estimated at less than 500 milk cows 2 years and older. Estimates included in District and State totals.

TEXAS CATTLE AND CALVES BY COUNTIES

1/ Revised. 2/ Cow classification for January 1, 1970 and prior years is based on age. Also beginning with 1970 the classification is based on cows that have calved, regardless of age and that is the series to be continued. \* Data reported but estimated at less than 500 milk cows or less than 2,000 cattle on feed. Included in District and state totals.

1/ Includes wool from fed lambs. \* Reported but estimated less than 500 hogs, 1,000 head of sheep, ewes 1 year and over, all Angora goats and 1,000 pounds of wool or mohair. Included in District and State totals.

## SURVEY METHODS

### CATTLE AND HOGS

The annual cattle and hog inventory survey for 1970 was conducted on a probability basis using multiple frame sampling techniques. These procedures provide the most accurate data, at the county, district, and state level, that is possible, short of complete enumeration.

The universe of livestock operators is composed of two parts, those contained within a list of farm and ranch operators (list frame) and those included in specified land areas (area frame). The 1970 list frame contained 170,379 names from ASCS files supplemented by lists of operators supplied by commodity associations, county agents, and several other sources. This list was divided into four size groups called strata for which the following boundaries were defined.

| Stratum |                                                     |                |
|---------|-----------------------------------------------------|----------------|
| 1       | No livestock codes present but 1-999 acres in farm  |                |
|         | All cattle                                          | 1- 99 head     |
|         | Milk cows                                           | 1- 19 head     |
|         | All hogs                                            | 1- 49 head     |
|         | Fall or spring sows                                 | 1- 6 head      |
| 2       | No livestock codes present but 1,000+ acres in farm |                |
|         | All cattle                                          | 100- 399 Head  |
|         | Milk cows                                           | 20- 49 head    |
|         | All hogs                                            | 50- 99 head    |
|         | Fall or spring sows                                 | 7- 12 head     |
| 3       | All cattle                                          | 400-2,999 head |
|         | Milk cows                                           | 50- 199 head   |
|         | All hogs                                            | 100- 499 head  |
|         | Fall or spring sows                                 | 13- 59 head    |
| 4       | All cattle                                          | 3,000+ head    |
|         | Milk cows                                           | 200+ head      |
|         | All hogs                                            | 500+ head      |
|         | Fall or spring sows                                 | 60+ head       |

After all operators on the list were classified as being in one of the above four strata, a systematic sample of names was drawn from each stratum for the 1970 December Livestock Survey. Livestock questionnaires were mailed to 39,293 farmers and ranchers during November and December. Approximately 50.2 percent of the questionnaires were returned by mail. Of the farmers and ranchers who did not respond by mail, a subsample was selected and these operators were interviewed by telephone or personal visit. This was done so all Texas farmers and ranchers could be represented in the estimates. The table below indicates the number of operators in each stratum, the number of questionnaires mailed, the number and percent returned by mail, and the number of operators contacted by telephone or personal visit.

The area frame, representing 100 percent coverage of the state contains 850 segments randomly located throughout the state. Location and size of the segments are dependent upon the use made of the land. Most segments are about one square mile for intensive cultivated areas, slightly smaller for urban and residential areas and considerably larger for open range areas. Operators of the land within the specified boundaries of these segments were personally interviewed for livestock information during the last week of November and first week of December.

The names of the operators interviewed on the area frame were then matched with names appearing on the list frame to determine incompleteness of the list frame. The expanded data from these (non-matching) operators were added to corresponding data from the list expansions to create the multiple frame estimate for all livestock inventories. The incompleteness of the list frame was estimated to be 13 percent for all cattle, 17 percent for beef cows, 4 percent for milk cows and under 30 percent for all hogs and pigs.

# SURVEY METHODS

## SHEEP AND GOATS

The January 1, 1971 sheep and goat survey was carried out using multiple frame sampling procedures comparable to last year. Names of persons filing during 1969 for wool and/or mohair were received from the ASCS and used to update the existing list of sheep and/or goat raisers. If a person had filed anytime during 1968 or 1969 he was considered as part of the current sheep universe. Any individual who had not filed for wool and/or mohair incentive payments either of those two years was removed from the universe.

The list, being a combination of two year filings, contained 20,048 names, of which a few were sheep feeders not on the ASCS filings list. Each operation was stratified using pounds of wool, number of unshorn lambs sold, and pounds of mohair. Each operator was placed in the highest stratum (1 to 4) for which he qualified. Stratum 5 is reserved for drylot sheep feeders with 2,000+ head capacity.

The following is the criteria by which all list operators are classified into the respective stratum.

| Stratum |                                    |         |             |
|---------|------------------------------------|---------|-------------|
| 1       | Wool                               | 1-      | 1,999 lbs.  |
|         | Unshorn lambs sold                 | 1-      | 199 head    |
|         | Mohair                             | 1-      | 1,999 lbs.  |
| 2       | Wool                               | 2,000-  | 4,999 lbs.  |
|         | Unshorn lambs sold                 | 200-    | 599 head    |
|         | Mohair                             | 2,000-  | 4,999 lbs.  |
| 3       | Wool                               | 5,000-  | 14,999 lbs. |
|         | Unshorn lambs sold                 | 600-    | 1,999 head  |
|         | Mohair                             | 5,000-  | 14,999 lbs. |
| 4       | Wool                               | 15,000+ | lbs.        |
|         | Unshorn lambs sold                 | 2,000+  | head        |
|         | Mohair                             | 15,000+ | lbs.        |
| 5       | Sheep on feed<br>(Drylot capacity) | 2,000+  | head        |

After the list was stratified into the above defined categories, a sample was selected from each stratum at various specified rates. All individuals within the same stratum had the same chance of being selected in the sample. Those selected were mailed a questionnaire and asked to return it by mail. For various reasons some did not answer. To be sure of adequate representation it was necessary to draw a non-response subsample and these persons were contacted by telephone or personal interview. In this way all operators on the list are represented in the list expansions. The table below shows, by stratum, the number on the list and the number questionnaires mailed, returned, percent returned, as well as number of non-respondents interviewed.

JANUARY 1, 1971 SHEEP AND GOAT SURVEY

| List               | Stratum |       |       |     |    | Total  |
|--------------------|---------|-------|-------|-----|----|--------|
|                    | 1       | 2     | 3     | 4   | 5  |        |
| UNIVERSE           | 12,943  | 3,911 | 2,251 | 908 | 35 | 20,048 |
| ALL QUESTIONNAIRES |         |       |       |     |    |        |
| Mailed             | 2,696   | 1,955 | 2,251 | 908 | 35 | 7,845  |
| Returned           | 1,355   | 996   | 1,053 | 248 | 15 | 3,667  |
| Percent returned   | 50      | 51    | 47    | 27  | 43 | 47     |
| Enumerated         | 388     | 265   | 329   | 566 | 20 | 1,568  |

The sheep and goat data representing the incompleteness in the list frame (those having sheep but not filing in 1968 or 1969) was partially determined through the same operational procedures as used for cattle and hogs (last paragraph, previous page). In addition, a screening question on the area frame questionnaire asked each respondent whether or not he filed in either of those two years. This non-overlap expansion is added to the list expansion to arrive at inventory indications. The estimate for incompleteness of the list frame was between 1 and 2 percent for all sheep and lambs and less than 1 percent for all goats.

### FOREWORD

Texas Livestock Statistics updates the May 1974 bulletin and presents the county estimates for cattle, hogs, sheep and goats on ranches and farms.

These county statistics have been made possible by the Texas Legislature which provided the Texas Department of Agriculture with funds for the operation of an annual county statistical program. The project is in cooperation with the Statistical Reporting Service of the U.S. Department of Agriculture.

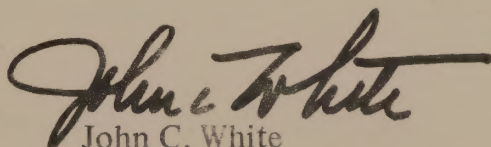

Estimates of stocker cattle on farms and ranches January 1, 1975, as requested by the livestock industry, are shown for Texas by Crop Reporting Districts. Estimates of total stocker cattle are also shown for States which normally ship cattle into Texas.

There are eight other publications--Vegetables, Small Grains, Field Crops, Cotton, Fruit and Pecans, Dairy, Poultry, and Cash Receipts--either published or in the process of preparation and publication.

In addition, one page summaries for all items, by counties, will be combined into one bulletin, Texas County Statistics. Single sheets for individual counties will also be available upon request.

These county livestock statistics do much to present the current livestock picture throughout the State of Texas. Texas producers and agri-business, thus, have updated information for planning their production and marketing programs.

Sincerely yours,

  
John C. White  
Commissioner of Agriculture

# CATTLE AND CALVES MOVEMENT OUT AND INTO TEXAS ON HEALTH CERTIFICATES, 1974

The Texas Animal Health Commission tabulates the health certificates filed monthly with their office. These tabulations include truck and rail movements out of and into Texas. Under Texas law, all livestock must have a health certificate unless consigned to a state or federally inspected slaughtering establishment or specifically approved livestock market. The United States maps below show the states sending and receiving cattle and calves.

## OUTSHIPMENTS (1,000 HEAD)

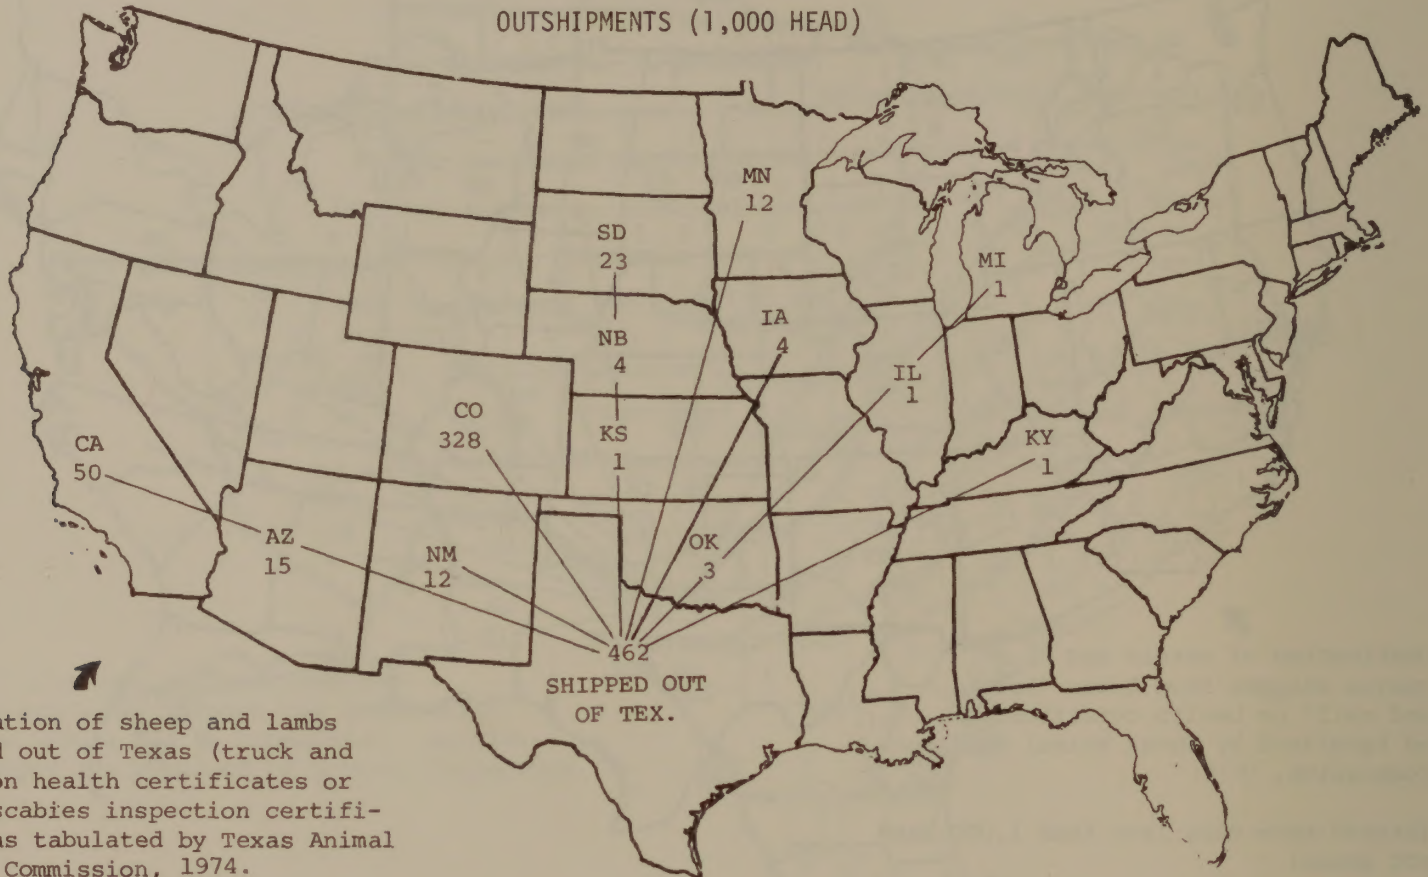

## INSHIPMENTS (1,000 HEAD)

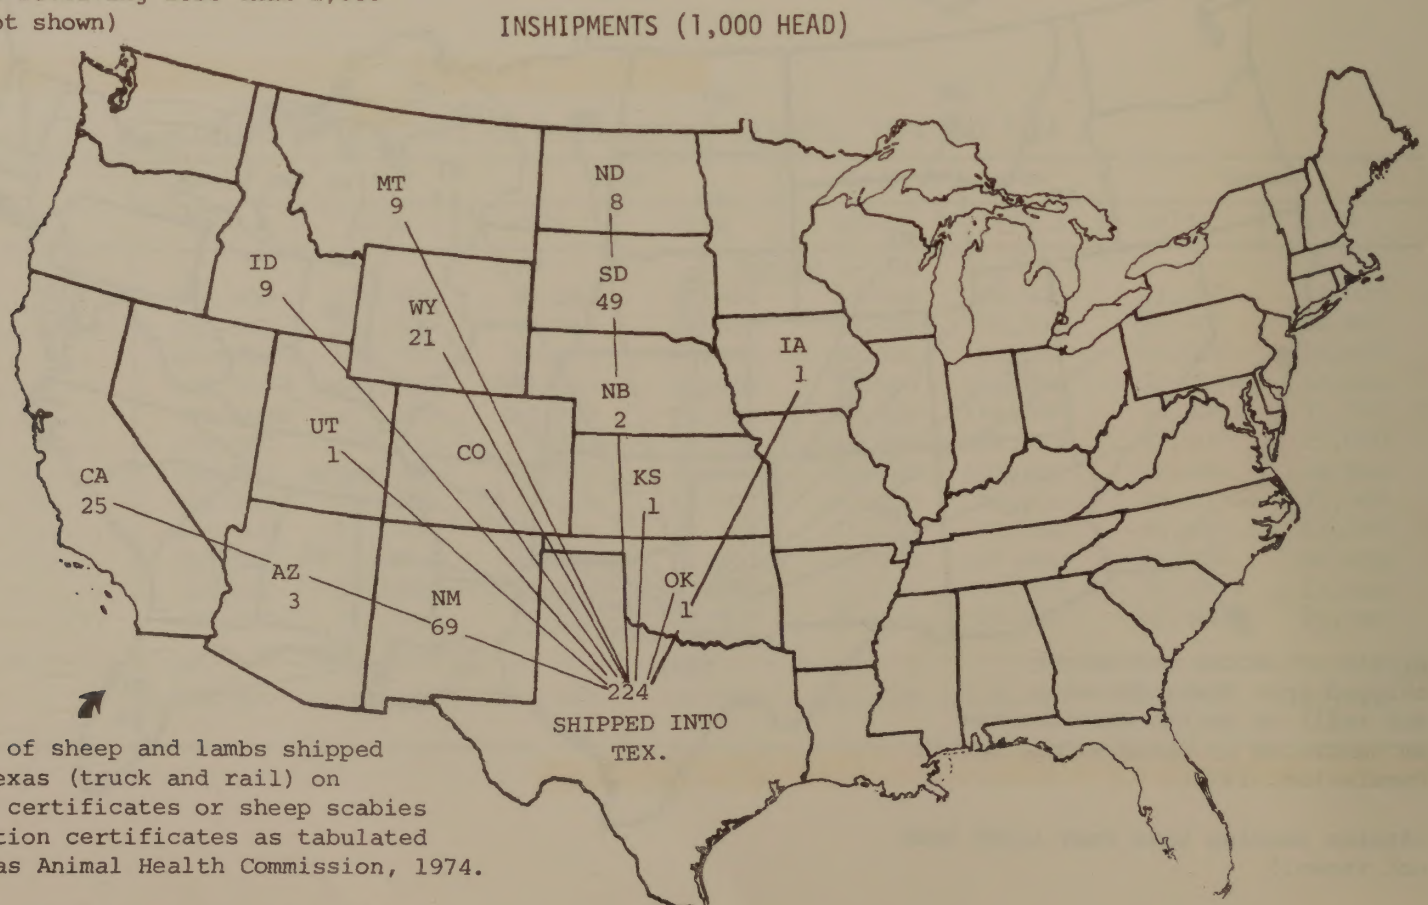

SHEEP AND LAMBS MOVEMENT OUT AND INTO TEXAS ON HEALTH CERTIFICATES  
AND SHEEP SCABIES INSPECTION CERTIFICATES, 1974

The Texas Animal Health Commission tabulates the health certificates and sheep scabies inspection certificates filed monthly with their office. The tabulations include truck and rail movements out of and into Texas. Under Texas law, all livestock must have a health certificate unless consigned to a state or federally inspected slaughtering establishment or specifically approved auction market. The United States maps below show the states sending and receiving sheep and lambs.

Destination of sheep and lambs shipped out of Texas (truck and rail) on health certificates or sheep scabies inspection certificates as tabulated by Texas Animal Health Commission, 1974.

(States receiving less than 1,000 head not shown)

Origin of sheep and lambs shipped into Texas (truck and rail) on health certificates or sheep scabies inspection certificates as tabulated by Texas Animal Health Commission, 1974.

(States sending less than 1,000 head not shown)

<sup>1/</sup> December 1, 1974.

Four major livestock and poultry surveys were conducted at the end of the 1974 year. These surveys included the December 1, 1974 Hogs, December 1, 1974 Chickens, January 1, 1975 Cattle and the January 1, 1975 Sheep and Goats. Both dairy and beef animal estimates were generated from the January 1, 1975 Cattle Survey (table below). Estimates for hogs, sheep, goats and chickens were generated from similar surveys.

The sample design for all surveys was based on multiple frame probability concepts with stratified random sampling. The universe of farm operators is composed of two parts:

- A. List frame--includes about 196,000 operators with 50 or more acres, plus known livestock and poultry producers regardless of acreage operated.
- B. Area frame--includes 156,004 sampling units (segments) stratified geographically and by land use. The five land use strata were:
  1. Intensive agriculture
    - a. Dryland
    - b. Irrigated
    - c. Potential irrigated
  2. Extensive agriculture
  3. Cities and towns
  4. Range (grazing)
  5. Marginal (agricultural activity is nonexistent or minimal)

A sample of 848 segments was selected from the area frame and enumerated in 1974. Using aerial photography, each segment was broken into tracts for enumeration. A tract is defined as all land inside a segment which is under one operation. About 5,600 tracts representing all agricultural operations in Texas were enumerated in the 848 sample segments. Of these 5,600 operators, 3,680 had agricultural operations. Of these, about 1,000 were not on the list frame. This part of the area sample, generally referred to as the non-overlap domain, provides a random sample of farms or ranches not included on the list frame. Expanded data (reported data for each sampling unit multiplied by the reciprocal of the unit's probability of selection) from the non-overlap sample when added to expanded data from the list sample provided unbiased estimates for each of the commodities shown in this bulletin. Since the area sample was not large enough to generate precise county estimates, special proration procedures were used to distribute the non-overlap estimates to counties. These procedures are based on distributions available from much larger list sample.

The list sample was selected from the list frame of 196,136 names. This list was divided into strata based on size of operation. Each operator was placed in the largest stratum for which he qualified based on the number of head reported. The sample was optimally allocated to the strata and systematic sampling with a random start was used within stratum. Cattle questionnaires were mailed to 24,790 farms in late December. About 42 percent of the questionnaires were returned by mail. Of those producers who did not respond by mail, a sub-sample of about 2,400 was selected and these operators were interviewed by telephone or personal visit. In order to measure incompleteness of the list frame, 1001 tract operators from the area frame were interviewed by personal visit.

Sample and universe size and criteria for operator assignment to strata are shown in the following tables.

## CRITERIA
